

Dust Palliative Applications

Because of the amazing wetting ability of Oil Muncher it is useful in areas where dust is a problem. Use a concentration of approximately 1 part Oil Muncher to 80 or 100 parts water. Spray on. When using in tank trucks, fill the water tank with water and add 3 gallons of Oil Muncher. Do not reverse this procedure as foaming will cause filling problems. The use of Oil Muncher should gradually reduce the frequency and amount of water needed to continue dust in construction, sand and rock crushing operations, dirt race tracks, and similar areas.
